Setting up the monitor

Product Description

The IBM ThinkVision L170 Monitor works with a computer with a suitable on-board sub-system or Video Adapter card that can support SXGA 1280 x 1024, XGA 1024 x 768, SVGA 800 x 600, or VGA 640 x 480 at 60 Hz.

The product package should include the following items:

- User's Guide and Installation CD
- Monitor Safety and Warranty Information Manual
- IBM ThinkVision L170 Monitor Setup Guide
- Power Cord
- IBM ThinkVision L170 Monitor
- Analog Interface Cable - Attached to Monitor

Handling Instructions

Do not support the monitor within the screen area. The Liquid Crystal Display is glass and can be damaged by rough handling or excessive pressure.

1. Lift the monitor by placing your hands where indicated below.

2. Before using your monitor for the first time, remove the clear protective film from the front of the screen.
Workplace Preparation

This section gives advice on what you should consider before you set up your monitor.

Height
Position the monitor so that the top of the screen is slightly below your eye level when you sit at your workstation.

Orientation
Choose a position that gives the least reflection from lights and windows, usually at a right angle to any windows. Position the monitor directly in front of you so that you do not have to twist your body to use it. Tilt the monitor to a comfortable viewing angle.

Adjusting the Monitor Position

Viewing Angle
You can tilt the screen backward and forward as shown below.

Working Practices

This section gives advice on how you can work comfortably and reduce fatigue.

Rest
Take regular breaks. Vary your posture, stand up and stretch occasionally as prolonged use of computer workstations can be tiring.
Back
Sit back in your chair and use the backrest.

Hands
Adjust the seat height so that your forearms are approximately horizontal and your wrists are straight when using the keyboard. Your upper arms should be relaxed with your elbows near your body.
Use a light touch on the keyboard, keeping your hands and fingers relaxed. Allow a space in front of the keyboard to rest your wrists when not typing. Consider using a wristpad.

Eyesight
Working with monitors, in common with any prolonged close work, can be visually demanding. Look away from the screen periodically and have your eyesight checked regularly.

Screen settings
Set the screen brightness and contrast to a comfortable level. You may have to adjust this as the lighting changes during the day. Many application programs let you select color combinations which can help you to view in comfort. See the User controls section on page 15 for more information.

Caring for your Monitor
Be sure to turn off the power before you perform any maintenance on the monitor. Clean your monitor as follows:
- Gently wipe the device covers and the screen with a soft cloth.
- Remove finger marks and grease with a damp cloth and mild detergent; do not use solvents or abrasives.
- Never use flammable cleaning material to clean your IBM monitor or any other electrical apparatus.
Connecting your Monitor

1. Turn off your computer and all attached devices.

2. Connect the signal cable to the video port on the back of your computer. This port might be directly attached to your computer (figure A), or it might be part of a video adapter card (figure B). The video port on your computer or video adapter card might be blue to match the blue connector on your monitor’s video cable.

   ![Diagram A](image1)
   ![Diagram B](image2)

   * If the power cord supplied is not attached to the monitor, please follow the instruction below:

   a. Tilt monitor all the way forward.
   b. Hold the top of the cable cover (a) and pull it off.
   c. Gently lift the stand cover (b) along the top and then slide it backwards and off the stand.
   d. Connect the power cord to the power port on the back of your monitor.
   e. Replace the rear covers.

3. Insert the plug into a properly grounded electrical outlet.
Switching on your Monitor

1. Switch on the power source and your computer.
2. Switch on your monitor by pushing and releasing the power switch marked ♿.
   (To switch off your monitor, push and release the power switch again.)
3. To update or install device drivers, follow the instructions in the **Device Driver Installation** section on page 8.
4. To optimise the displayed image, run Auto Setup by following the instructions in the **Auto Setup** section on page 11.
Device Driver Installation

Driver installation for Windows 95 or Windows 98

This section must be completed before continuing with the Windows 95 or Windows 98 Auto Setup on page 13

To use the Plug and Play feature in Microsoft® Windows® 95 or Windows 98, files should be loaded from the IBM Monitor CD.

1. Turn off the computer and all attached devices.
2. Ensure that the monitor is connected correctly.
3. Turn on the monitor and then the system unit. Allow the system to boot into Windows 95 or Windows 98.
   Your computer’s Plug and Play code may warn you that your system hardware has changed. This means that it has detected your new monitor for the first time.
4. Open the DISPLAY PROPERTIES window by clicking START, SETTINGS, CONTROL PANEL and then double - clicking on the DISPLAY icon.
5. Click the SETTINGS tab.

- In case of Windows 95 :
  6. 1. Click the CHANGE DISPLAY TYPE button.
      2. Click the CHANGE MONITOR TYPE button.
- In case of Windows 98 :
  6. 1. Click the ADVANCED button.
      2. Click the MONITOR tab.
      3. Open the UPGRADE DEVICE DRIVER WIZARD window by clicking on CHANGE button and then select the NEXT button.
      4. Click the “Display a list of the known drivers for this device so that I can choose a specific driver” and then select the NEXT button.
7. Insert the Setup CD into the CD driver: and click the HAVE DISK button.
8. Click OK.
9. Ensure that the CD drive letter is selected, and then select ‘Drivers’ folder.
10. Choose IBM ThinkVision L170 monitor and Click OK. The files will be copied from the CD to your hard disk drive.
11. Close all open windows and remove the CD.
12. Restart the system.
   The system will automatically select the maximum refresh rate and corresponding Color Matching Profiles.
Driver Installation for Windows 2000 or Windows Me

To use the Plug and Play feature in Microsoft® Windows® 2000 or Microsoft Windows Millennium Edition(Me) files should be loaded from the IBM Monitor CD.

1. Turn off the computer and all attached devices.
2. Ensure that the monitor is connected correctly.
3. Turn on the monitor and then the system unit. Allow the system to boot into Windows 2000 or Windows Me.
4. Open the DISPLAY PROPERTIES window by clicking START, SETTINGS, CONTROL PANEL and then double-clicking the DISPLAY icon.
5. Click the SETTINGS tab.
6. Click the ADVANCED button.
7. Click the MONITOR tab.
8. Click the PROPERTIES button.
9. Click the DRIVER tab.
10. Open the UPGRADE DEVICE DRIVER WIZARD window by clicking on UPDATE DRIVER and then Click the NEXT button.
11. Select the “Display a list of the known drivers for this device so that I can choose a specific driver” and then Click the NEXT button.
12. Insert the Setup CD into the CD drive : and click the HAVE DISK button.
13. Click OK.
14. Ensure that the CD drive letter is selected, and then select the ‘Drivers’ folder.
15. Choose IBM ThinkVision L170 monitor and Click OK. The files will be copied from the CD to your hard disk drive.
16. Close all open windows and remove the CD.
17. Restart the system. The system will automatically select the maximum refresh rate and corresponding Color Matching Profiles.
Driver Installation for Windows XP

This section must be completed before continuing with the Windows XP Auto Setup on page 13

To use the Plug and Play feature in Microsoft® Windows® XP files should be loaded from the IBM Monitor CD.

1. Turn off the computer and all attached devices.
2. Ensure that the monitor is connected correctly.
3. Turn on the monitor and then the system unit. Allow the system to boot into Windows XP.
4. Open the DISPLAY PROPERTIES window by clicking START, SETTINGS, CONTROL PANEL and then double-clicking the DISPLAY icon.
5. Click the SETTINGS tab.
6. Click the ADVANCED button.
7. Click the MONITOR tab.
8. Click the PROPERTIES button.
9. Click the DRIVER tab.
10. Open the Hardware Update Wizard window by clicking on UPDATE DRIVER and then Click the NEXT button.
11. Select the “Install from a list or Specific location(Advanced)” and then Click the NEXT button.
12. Insert the Setup CD into the CD drive : and click the HAVE DISK button.
13. Click OK.
14. Ensure that the CD drive letter is selected, and then select the ‘Drivers’ folder.
15. Choose IBM ThinkVision L170 monitor and Click OK. The files will be copied from the CD to your hard disk drive.
16. Close all open windows and remove the CD.
17. Restart the system.
   The system will automatically select the maximum refresh rate and corresponding Color Matching Profiles.
Auto Setup

Auto Setup

The Setup Utility included on the installation CD is for displaying dot patterns. They do not replace or modify the display driver.

The Auto Setup instructions require the monitor to be warmed up for 15 minutes. This is not required for normal operation.

By pressing the Auto key, you will have direct access to Auto Adjustment.

When you first use your monitor you must perform Auto Setup. This procedure sets up your monitor to process the video signals from your computer without image discoloration or smearing. After you perform Auto Setup, the settings are stored and used each time you turn on the monitor.

To optimise the displayed image a set-up utility is provided on the CD. Operation of the utility is dependent on the operating system on your computer. For correct operation locate the operating system on your computer from the table below and follow the appropriate instructions. You can choose to run AUTO SETUP for each operating system that you use. This means that if you sometimes use your monitor while running any version of Windows and sometimes also use it from within DOS (not a DOS window), you must run AUTO SETUP for both Windows and DOS. You can run versions of AUTO SETUP in any order.

<table>
<thead>
<tr>
<th>Operating System</th>
<th>Corresponding Auto Setup procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>DOS</td>
<td>Auto Setup for DOS on page 12</td>
</tr>
</tbody>
</table>

Before you begin AUTO SETUP for your computer:

1. Make sure the computer’s video mode is set in the range of the supported screen resolution shown in the Table on page 21.

You should perform AUTO SETUP for each screen mode you use.

The AUTO SETUP process only applies to the current screen mode. When a new mode is selected, repeat this section to reset the monitor.
Auto Setup for DOS

To set up the monitor automatically in DOS, do the following:

1. Turn on the monitor first; then turn on the computer.
   If the message **CHECK SIGNAL CABLE** is displayed, or if nothing is displayed, check:
   • that the video interface cable is connected properly.
   • the correct video adapter card is installed.
   • the correct supported display mode is selected for your computer.

2. Wait approximately 15 minutes, until the monitor warms up.

3. Insert the **User’s Guide and Installation Files CD** into the computer CD-ROM drive.

4. Display the command prompt screen of the DOS full-screen display.

5. Type `d:` (change the drive letter to match your CD-ROM drive if it is not drive D).

6. Type `TESTPATD` and press ENTER.

7. Select from the screen the number for the color or text mode you want to set up.

8. Select from the screen the number for the video mode you want to set up. You can repeat this process for as many of the color and video modes as you need.

9. When the dot pattern appears, press the Image Setup ( ) button at the bottom of the monitor. This activates the **AUTO SETUP** procedure, which will optimize the display settings with the provided dot-patterns. The screen will momentarily turn black while auto adjustment proceeds.

10. When finished, the Auto Adjustment menu disappears and the screen returns to a normal display.

11. Press the ESCAPE key to exit the test pattern program.

12. Type **Exit** at the command prompt to return to Windows.

If you use other operating systems, perform the appropriate Auto Setup for those systems using instructions given in "**Auto Setup for Windows 95, Windows 98, Windows NT, Windows 2000, Windows Me or Windows XP** on page 13".

---

- If the monitor is in standby mode (STANDBY ON), it may automatically turn off while you are waiting for it to warm up. If this happens, switch off the monitor and switch it on again after a few seconds.

- If you are using PC-DOS/V, change to U.S. mode by typing `CHEV US` and pressing ENTER at the command prompt.

- The size and diversity of the dot pattern varies with the screen resolution.

To set up the monitor automatically in Windows 95, Windows 98, Windows NT, Windows 2000, Windows Me, or Windows XP, do the following:

1. Turn on the monitor first; then the computer.
   If the message **CHECK SIGNAL CABLE** is displayed, or if nothing is displayed, check:
   - that the video interface cable is connected properly.
   - the correct video adapter card is installed.
   - the correct supported display mode is selected for your computer.

2. Wait approximately 15 minutes, until the monitor warms up.

3. Drag the icon bar and tool bar, if they are displayed, to the bottom of the screen.

5. Check the operating system installed on your computer and follow the instructions from the table below.

6. When the test pattern appears, press the Image Setup ( ) button at the bottom of the monitor. This activates the AUTO SETUP procedure, which will optimize the display settings with the provided test patterns. The screen will momentarily turn black while auto adjustment proceeds.

7. When finished, the Auto Adjustment menu disappears and the screen returns to a normal display.

8. Press the Esc key to return to Windows.

You have completed the monitor setup for Windows. If you are using the DOS operating system, go to **Auto Setup for DOS** on page 12.

<table>

</tr>
</tbody>
</table>
If the monitor is in standby mode (STANDBY ON), it might automatically turn off while you are waiting for it to warm up.

**Manual Setup**

Normally, you can complete the setup procedure using AUTO SETUP; however, if your screen image is still distorted after you perform AUTO SETUP or the Installation CD does not run on your system, perform MANUAL SETUP.

1. Have your monitor turned on for about 15 minutes, until the monitor warms up.
2. Display the image you most frequently use on the screen then go to windows shut down mode.
3. Press the OSD Enter button ↓ at the bottom of the monitor to display the initial OSD menu.
4. Use the ← or → button to select the Image Setup icon ( ) and press the OSD Enter button ↓ to access.
5. Use the ← or → button to select Clock and Phase to adjustment.
   (a) "Clock" (pixel frequency) controls the number of pixels scanned by one horizontal sweep.
   If the frequency is not correct, the screen shows vertical stripes and the picture does not have the correct width.
   (b) "Phase" adjust the phase of the pixel clock signal. With a wrong phase adjustment the picture has horizontal disturbances in light picture.
6. Use a select ( ← or → ) button to manually adjust to correct and execute save go to up menu then press the Exit ( ) button to leave OSD menu.

You have completed monitor setup.

<td>Enters menus and sub-menus and selects the highlighted option.</td>
</tr>
</tbody>
</table>
Operation

- Press the OSD Enter button to display the main OSD menu.
- Use the Arrow buttons to move among the icons. Select an icon and press OSD Enter to access that function. If there is a sub-menu, you can move between options using the Arrow buttons, then press OSD Enter to select that function. Use the Arrow buttons to make adjustments. Press the button to save.
- Press the Exit ( ) button to move backwards through the sub-menus and exit from the OSD.
On-screen display (OSD) controls

The settings adjustable with the user controls are viewed through the On-Screen Display (OSD). Press the OSD Enter button (↓) to activate the OSD.

The LCD monitor needs time to become thermally stable the first time you turn it on each day. Thus, to achieve more accurate adjustments for parameters, allow the LCD monitor to warm up (be On) for at least 15 minutes before making any screen adjustments.

- **Off** - increases by 1 each time the button is pressed.  
- **Default** - increases continuously while the button is pressed.  
- **Slow** - increases by 1 every 2 seconds while the button is pressed.  

Use the ← or → button to select time from 5 to 60 seconds.
Further Information

Display modes

The display mode the monitor uses is controlled by the computer. Therefore, refer to your computer documentation for details on how to change display modes.

The image size, position and shape might change when the display mode changes. This is normal and the image can be readjusted using AUTO SETUP and the monitor controls.

Unlike CRT monitors, which require a high refresh rate to minimize flicker, TFT technology is inherently flicker-free. If possible, configure your computer for 1280 × 1024 addressability at 60Hz vertical refresh rate.

For the display modes listed on the next page, the screen image has been optimized during manufacture.

† Recommended

Note: VESA timings are as detailed in the VESA “Display Monitor Timing Specification”. Version 1.0, Revision 0.8, dated 09/17/98.
Power Management

To benefit from power management, the monitor must be used in conjunction with a computer that implements the Video Electronics Standards Association (VESA) Display Power Management Signalling (DPMS) Standard.

The power management feature is invoked when the computer recognizes that you have not used your mouse or keyboard for a user-definable period. There are several states as described in the table below.

As an ENERGY STAR® Partner, IBM has determined that this product meets the ENERGY STAR® guidelines for energy efficiency.

For optimal performance, switch off your monitor at the end of each working day, or whenever you expect to leave it unused for long periods during the day.

<table>

</thead>
</table>
| Computer does not boot after the graphics adapter is installed | There is another graphics adapter in the computer | • Remove the other graphics adapter plugged into one of the expansion slot.  
• If the card is built-in to the motherboard, check your system manual for instructions on how to disable the built-in adapter. | Connecting your Monitor section on page 6 |
| The screen image is garbled or unusable (rolling screen images, overlapping screen images or a blank screen) | The display driver is trying to use a setting your monitor does not support | • Select the correct monitor. | Connecting your Monitor section on page 6 |
| Screen is blank and power indicator is off | No power to monitor | • Ensure that the electrical outlet and the monitor are both switched on.  
• Check that the power cord is firmly plugged into the electrical outlet and the power supply unit.  
• If the power cord plug has a removable fuse, replace it.  
• Try another power cord.  
• Try another electrical outlet. | Connecting your Monitor section on page 6 |

Further Help

If you are unable to correct the problem yourself, you may seek further help as follows:

Call the IBM HelpCenter®.

In the US call 1-800-772-2227
In Canada (Toronto Only) call 416-383-3344
In Canada (all others) call 1-800-565-3344

In other countries contact your dealer, retailer, or other IBM authorized Servicer.

Before calling, please have available as much of the following information as possible:

1. Model and serial number from the label on your monitor.
2. Purchase receipt.
3. Description of problem.
4. Computer type and model.
5. System configuration (hardware fitted, etc.).
7. Operating System and version number.
8. Display driver version number.
9. Video Adapter Type.

If possible, stay by your computer. Your Technical Support Representative may wish to go through the problem with you during the call.

More help, late-breaking news and details of the latest accessories for these products may be found on the worldwide web at:

# Specifications

This color monitor (Type-model 6734-**1**) uses a 17-inch TFT LCD

| Dimensions      | Height: | 409.5 mm (16.1 in.) |
|                | Depth:  | 228.0 mm (9.0 in.)  |
|                | Width:  | 399.8 mm (15.7 in.) |

| Weight          | Unpackaged: | 6.6 Kg (14.52 lb) |
|                | Packaged:   | 7.4 Kg (16.28 lb) |

| Tilt            | Tilt:       | – 5° / + 40° |

| Image           | Viewable Image Size: | 431.80 mm (17.0 in.) |
|                | Maximum Height:      | 270.34 mm (10.6 in.) |
|                | Maximum Width:       | 337.92 mm (13.3 in.) |
|                | Pixel Pitch: H x V:  | 0.264 mm (.010 in.) |

| Power Input     | Supply Voltage:      | 100 - 240 V ac, 60/50 ± 3 Hz |
|                | Max Supply Current:  | 1.5 A at 120 V ac |

| Power Consumption | Normal Operation: | < 45 W |
|                  | DPMS Stand-by:    | < 2 W |
|                  | DPMS Suspend:     | < 2 W |
|                  | DPMS off:         | < 1 W |

| Video Input      | Input Signal:      | Analog Direct Drive, 75 ohm 0.7 V |
|                  | Horiz. Addressability: | 1280 pixels (max) |
|                  | Vert. Addressability:  | 1024 lines (max) |
|                  | Clock Frequency:     | 135 MHz |

| Communications   | VESA DDC:           | 2 B |

| Supported Display Modes | VESA Standard modes between | 30 kHz - 80 kHz |
|                         | Horiz. Frequency:     | 55 Hz - 75 Hz |

| Environment        | Temperature: Operating: | 10 to 35° C (5 to 95° F) |
|                   | -20 to 80° C (-4 to 140° F) |
|                   | Shipping:               | -20 to 80° C (-4 to 140° F) |
|                   | Humidity: Operating:    | 10 to 80% |
|                   | Storage:                | 5 to 95% |
|                   | Shipping:               | 5 to 95% |
The following parts are for use by IBM service, or IBM authorized dealers, to support the customer warranty. Parts are for service use only.
